

WEBs Investments Announces Name Changes for Defined VolatilitySM ETFs

October 27, 2025

PARK CITY, Utah, Oct. 27, 2025 (GLOBE NEWSWIRE) -- [WEBs Investments Inc. \(WEBs\)](#), an innovator in volatility-managed investment solutions, today announces updated fund names for its Defined VolatilitySM ETF suite, effective immediately. The revised names are designed to give investors a clearer view of each fund's underlying exposure, creating a unified structure across the entire Defined Volatility lineup.

The WEBs Defined Volatility ETFs use a systematic, rules-based approach that adjusts exposure to the SPDR S&P 500 ETF Trust (SPY), Invesco QQQ Trust (QQQ), or the Select Sector SPDR ETFs based on real-time market volatility. When volatility falls below target levels, the funds increase exposure to the underlying ETFs. When volatility rises, exposure is reduced, reallocating to cash equivalents or U.S. Treasuries. This adaptive framework is designed to help investors stay invested while seeking to manage risk and maintain participation through changing market conditions.

The following fund name changes are now effective:

Ticker	Previous Name	New Name
DVSP	WEBs Defined Volatility SPY ETF	WEBs SPY Defined Volatility ETF
DVQQ	WEBs Defined Volatility QQQ ETF	WEBs QQQ Defined Volatility ETF
DVRE	WEBs Defined Volatility XLRE ETF	WEBs Real Estate XLRE Defined Volatility ETF

Investing involves risk, including the loss of principal.

Investors should consider the investment objectives, risks, charges and expenses carefully before investing. For a prospectus or summary prospectus with this and other information about the Funds, please call 844.455.9327 or visit our website at websinv.com. Read the prospectus or summary prospectus carefully before investing.

The Funds are newly formed and have limited operating history. The Funds are passively managed ETFs listed for trading on the NASDAQ. The Funds implement their investment objective by investing, under normal market conditions, at least 80% of its net assets (including borrowings for investment purposes) in financial instruments that achieve the investment results of the Index. The Funds will, from time to time as determined by the Index, hold cash, cash-like instruments or high-quality fixed income securities. To the extent the Underlying ETF concentrates (i.e., holds 25% or more of its total assets) in the securities of a particular industry or group of industries, the Funds will concentrate their investments to approximately the same extent as the Underlying ETF. Because the Funds seek exposure to the Underlying ETF, the Funds' investment performance largely depends on the investment performance and associated risks of the Underlying ETF. The Funds are classified as "non-diversified" which means that the Funds may invest a higher percentage of their assets in a fewer number of issuers than is permissible for a "diversified" fund. If for any reason the Funds are unable to rebalance all or a portion of their portfolio, or if all or a portion of the portfolio is rebalanced incorrectly, the Funds' investment exposure may not be consistent with the Funds' investment objective. In these instances, the Funds may have investment exposure to the Underlying ETF that is significantly greater or less than what is intended in their strategy. As a result, the Funds may be more exposed to leverage risk than if they had been properly rebalanced and may not achieve their investment objective. There can be no assurance that the Funds will achieve their investment objective and could incur substantial losses. The Funds' returns will likely differ in amount, and possibly even direction, from the returns of the Underlying ETF. These differences can be significant, the Funds could lose money regardless of the performance of their Underlying ETF and as a result of portfolio rebalancing, fees, the Underlying ETF's volatility, compounding and other factors, the Funds are unlikely to match the performance of the Underlying ETF.
